

## Exercise for Unit 3

Name: Gillie S. Calanuga & Michael Rey T. Tuando

Date: March 10, 2025

Year and Section: BSCS 3A-AI

1. (10 points) Use the Wikipedia python module and access any topic, as you will use that as your corpus, with a word limit of 1000 words.

Example usage:

```
import wikipedia

# Fetch a Wikipedia page
page = wikipedia.page("Natural_language_processing")
text = page.content[:1000] # Limit to 1000 characters
```

2. (60 points) Train 2 models: a Bigram and Trigram Language Model, use the shared code as reference for bigram modeling, and update it to support trigrams.
3. (30 points) Using a test sentence "*The quick brown fox jumps over the lazy dog near the bank of the river.*" OR generate your own test sentence, create a function that will determine the perplexity score for each trained model.

a. Bigram model perplexity -> Test Sentence "" -> Score:

b. Trigram model perplexity -> Test Sentence "" -> Score:

Upload your output in a public Github Repository named CCS249-EXERCISE-3-LASTNAME and attach the Github link here: <https://github.com/michaelryt/CCS249-EXERCISE-3-CALANUGA-TUANDO.git>
